## Oxford Primary Sludge Works

### Careful Planning and Implementation

**End User:** Thames Water

**Client:** Thames Water

### Scope:

The existing pumping system had 3 x 4" pump sets, 2 out of service and 1 delivering a fraction of the duty required.

**Gel Engineering** were contracted to decommission existing pump sets, cabling and containment and install new pumps, VSD's, containment wiring, starter panels and pipework.

The completed installation is providing Thames Water with enhanced throughput whilst giving the client far more options with product handling and product transfer.
